How to read this report

This report contains two kinds of rule, and only the first is a question to you.

- **Your rules** — written for your address space: the rule names one of your networks, or carries your team's tag or zone. You are the one who can say whether they are still needed.
 - **Inbound** — other systems may reach yours. These are your exposure.
 - **Outbound** — your systems may reach elsewhere.
 - **Both ends yours** — source and destination are both networks of yours.
 - **No direction** — attributed by tag, name or device group, which does not say which side you are on.
- **Rules that also cover your networks** — estate-wide rules that happen to include you: ping, DNS, Active Directory. Nothing is being asked of you here; they are listed so you can see the access you already have, and object if one of your systems must not have it.

Rules appear in the order the firewall evaluates them, grouped into the blocks it evaluates as a unit; the first matching rule wins. Addresses are the result of resolving address objects and groups. Object names are given so they can be cited in a change request. Questions about a rule, or need one changed? Raise a ticket with the firewall team and quote the rule name and its location.

Usage data not included. Rule hit counters are runtime state and are not contained in a configuration backup. This report therefore makes no statement about whether a rule is used. Hit counts can be collected separately via the optional enrichment module.

Your networks (1)

What this report considers yours, and how many of your own rules touch each. Everything else follows from this list, so a wrong entry makes the rest wrong in the same way.

NETWORK	SYSTEM	INBOUND RULES	OUTBOUND RULES
10.20.1.7/32	rpt-01 (reporting host, inside the payments network)	0	0

Objects and groups inside your networks (1)

What your networks are called in the firewall. Every address object and group whose addresses lie entirely within your networks — these are the names to quote when you ask for a rule to be changed, and the names you will see in the rules below.

NAME	KIND	DEFINED IN	COVERS	DESCRIPTION
production-host-03	object	DG-Production	10.20.1.7/32	production application host 3

Your rules (2)

Written for your address space. These are the ones to decide on.

Inbound — who reaches your networks (0)

Traffic from elsewhere that is permitted to reach the networks you own.

No rules in this category.

Outbound — what your networks reach (0)

Traffic your systems are permitted to send to other networks.

No rules in this category.

Both ends yours (2)

Source and destination are both networks you own, so no other team is involved.

POS	RULE	YOUR NETWORKS	OTHER SIDE	SERVICE / PORTS	APPLICATION	TICKET	FINDINGS
1. DG-Production — pre-rules — applies to 001901000001; 2 of 20 rules in this block concern you							
6	production-pre-06	grp-production-nested, net-production	grp-production-nested, net-production	tcp/443, tcp/8080, tcp/8443	any	CHG0010035	INFO Expires soon
17	production-pre-17	grp-production-nested, net-production	grp-production-nested, net-production	tcp/443, tcp/8080, tcp/8443	any		INFO No change reference

Rules that also cover your networks (14)

Estate-wide rules maintained centrally. Nothing to decide — this is for information.

Outbound — what your networks may already reach (4)

Central rules that let your systems out: DNS, updates, monitoring and the like. No need to request any of this.

POS	RULE	YOUR NETWORKS	OTHER SIDE	SERVICE / PORTS	APPLICATION
1. DG-Production — pre-rules — applies to 001901000001; 4 of 20 rules in this block concern you					
3	production-pre-03	net-production	any	tcp/443	web-browsing
8	production-pre-08	net-production	partner-range	tcp/22	ssh
14	production-pre-14	net-production	any	tcp/443	web-browsing
19	production-pre-19	net-production	partner-range	tcp/22	ssh

Without a clear direction (10)

Rules permitting any source to any destination, so no side can be called yours or theirs.

POS	DIRECTION	RULE	YOUR NETWORKS	OTHER SIDE	SERVICE / PORTS	APPLICATION
1. DG-DMZ — pre-rules — applies to 001901000003; 2 of 20 rules in this block concern you						
4	No direction	dmz-pre-04	—	any	any	any
15	No direction	dmz-pre-15	—	any	any	any
2. DG-Production — pre-rules — applies to 001901000001; 2 of 20 rules in this block concern you						
4	No direction	production-pre-04	—	any	any	any
15	No direction	production-pre-15	—	any	any	any
3. DG-Shared-Services — pre-rules — applies to 001901000000, 001901000002, 001901000004; 2 of 20 rules in this block concern you						
4	No direction	shared-services-pre-04	—	any	any	any
15	No direction	shared-services-pre-15	—	any	any	any
4. DG-Development — pre-rules — applies to 001901000002; 2 of 20 rules in this block concern you						
4	No direction	development-pre-04	—	any	any	any
15	No direction	development-pre-15	—	any	any	any
5. DG-Partner — pre-rules — applies to 001901000004; 2 of 20 rules in this block concern you						
4	No direction	partner-pre-04	—	any	any	any
15	No direction	partner-pre-15	—	any	any	any

Cleanup candidates (2)

Findings on your own rules only, most significant first. Rules that merely cover your networks are maintained by the firewall team and are not listed here.

SEVERITY	FINDING	RULE	LOCATION	DETAIL	SUGGESTED ACTION
INFO	Expires soon EXPIRING_SOON	production-pre-06	DG-Production/pre	The stated expiry is 2026-08-27, in 0 days.	Confirm whether the access is still needed before it lapses.
INFO	No change reference NO_TICKET	production-pre-17	DG-Production/pre	The description holds no recognisable ticket number, so the rule cannot be traced back to an approved change.	Add the ticket reference to the description.

Generated by panorama-team-review 0.1.0 from example-estate.xml. This report reflects the configuration as backed up; changes made afterwards are not included.
